[Best of Class – i-Cat](#)

Posted on Thursday 19 November 2009

I have been working with Lou Shuman and [The Pride Institute](#) creating a unique Technology Fair to showcase the leading technologies in a number of different dental categories. The first fair will be presented at the [Greater New York Dental Meeting](#) (GNYDM) coming November 29 to December 2. I will be highlighting the featured technologies throughout the next month. If you are attending the GNYDM be sure to come by the Fair.

General Category: Diagnostic

Product: [i-CAT](#)

CBCT (Cone Beam CT)

CBCT (Cone Beam Computed Tomography) is a rapidly growing technology that has the potential to completely change how we assess and diagnose all oral-facial conditions. The technology (flat panel detector) in i-CAT is superior to other machines and the images in up to 6 sizes are acquired rapidly with low radiation. The hardware and software are designed to work together to rapidly process the acquired images. They offer many educational resources like the unique 3D Imaging Institute. The images are compatible with international standards and there are many other software applications that accept i-CAT data. While not all are exclusive to i-CAT, it's the combination of these superior features that make i-CAT the choice and leader in CBCT.
